Dear Carol Collier,

We feel that your recent decision regarding exploratory test wells within the Delaware River Basin is punishing us as landowners for being good stewards of the land. Because of our stewardship the quality of the water in the upper Delaware is what it is today.

For over 2 years, DRBC has had ample time to put regulations in place. SRBC was able to implement their regulations within a timely fashion. Not only are we being punished but we are also being discriminated against.

Allegations with no scientific backing have been made by those opposed to drilling in our area. It is very upsetting to those of us who live here to see this negativity knowing that false accusations are being made. It is time for us as landowners to stand up for our rights and be heard, for we own the bulk of the land. Please move forward with permitting, stop the delays and discrimination, and base your decisions on science, not politics or emotional misinformation.

Thank you,
